

## Introducing an affordable flow sensor for residential and commercial systems

- ◆ Now the water saving benefits of detecting leaks, broken sprinkler heads or stuck zone valves are available for smaller systems with lower flow zones.
- ◆ The patented ELF (Enhanced Low Flow) sensor makes it easy to add flow monitoring and control to systems with lower flow rates, from 20 GPM down to a low of 0.2 GPM.
- ◆ Instead of estimating your water usage, accurately measure it in real time.
- ◆ 2 Easy to install models
  - PVC with 3/4" socket weld pipe connections
  - 1 inch male pipe thread connections for any pipe material
  - Install above or below grade on horizontal or vertical pipe
- ◆ No need for straight pipe lengths before or after the sensor
  - the mounting tee straightens the flow
  - Control valves may be threaded directly onto the downstream side
  - Installed length with a valve is under 12 inches
  - Fits in a standard rectangular valve box

- ◆ Simple to connect
  - 2 color coded wire leads attach to flow terminals of most SMART irrigation controllers
  - Wire may be extended up to 2,000 feet
  - Follow set-up instructions on controller
- ◆ The ELF with proven reliable technology, is easy to install making it easy to conserve water, save money, and maintain landscapes
